Lancaster Farming

VOL 9 NO. 24 Lancaster Farming, Saturday, May 16, 1964 $2 Per Year

NEWSPAPER FARM EDITORS MET with President Johnson this week Shown left to right are, Bill Humphries, Raleigh, (N.C.), News and Observer, president of the NFEA; Herb Karner, Tulsa World; Jack Owen, Lancaster Farming, (Arrow), Bernie Benner, UPI, Washington; Rex Conn, Cedar Rapids (Iowa) Gazette, Ike Groff, Lancaster Livestock Reporter (Arrow); Bill Zipf, Columbus (Ohio) Dispatch, and President Johnson Also present at the conference but not shown in the picture were Mr. and Mrs. Jack E. Keyser, Lancaster.

President Sees Brighter Beef Price Picture Ahead

WASHINGTON — President Johnson told Newspaper Farm Editors, Tuesday, the combination of increased beef consumption, increased government buying for school lunches and needy families, and lower beef imports, will have the effect of pushing the cattle business back to 1962 levels

He said the federal Government plans to buy an additional 100 million pounds of beef for the two programs, and added, "We have sent a team of top men to Europe to try to find new markets."

Raymond Ioanes, Administrator of Foreign Agricultural Service, believes the U S will export more meat in the year ahead

He said the price of dressed beef in France is nearly double the price of carcasses here In Italy the prices are nearly as high, and the Italians have turned to beef imports to help fight inflation in their country.

In addition, he said, Australia, today, can make as much

(Continued on Page 9)

War On Poverty Can Only Present The Opportunities

WASHINGTON — All the War on Poverty can do is provide opportunities, the people must take advantage of the opportunities, a Deputy Under Secretary of Agriculture said Monday.

James Sundquist of the U S. Department of Agriculture told Newspaper Farm Editors that the Economic Opportunity Act is just a gap filler rather than the whole war.

"Even if the bill fails," he said, "The war is on People have enlisted and anything that helps the economy is part of the war on poverty"

This program is not a "hand out" he said. The objective is to find the cause of poverty and help people find the way out. "We have found that poverty can be inherited just as wealth can be inherited," he added.

Sundquist pointed out that 9 3 million families, about 20 per cent of the population, earn less than $3,000 yearly. The $3,000 figure, he said is an arbitrary one, and is used only as a guide line for determining who needs help.

Poor people are poorly educated and have children who are poorly educated, he explained. The program is aimed

(Continued on Page 7)

Wheat Program Sign-Up Period Is Extended

The sign up period for the 1964 voluntary wheat program has been extended for one week, according to the U. S. Department of Agriculture.

The final date for farmers to sign up was moved back from May 15 to May 22.

The extra week was added for two reasons. The late, wet, cold spring in some areas forced extensive field work during the original sign up period, and the extensive interest and program participation overworked some county ASCS offices a spokesman for the Department said this week in Washington at a meeting of Newspaper Farm Editors.

While the program is voluntary, the producer who wishes to get price support loans and purchases, plus acreage diversion payments, and certificates based on his proportionate share of the domestic and foreign market must sign up with the county office before May 22.

The domestic certificates will have a fixed face value of 70 cents per bushel and the ex-

Plastic Tobacco Cover Pushes Early Plants

How do you get tobacco plants ready for the field two weeks earlier than normal?

One answer may be a miniature greenhouse made of plastic over a wooden frame.

Henry B Engle, research agronomist with the U S. Department of Agriculture stationed at the Southeast Pennsylvania Research Laboratory farm near Landisville, believes tobacco plants grown under the clear plastic may be field ready nearly two weeks ahead of plants under glass or muslin.

All beds in the experiment were seeded on the same day—April 10—but the plants certainly do not look the same. Leaves on the plants under plastic were easily the size of a half dollar at the middle of the week while those under the glass in sashes averaged about the size of a dime, and the plants under muslin had leaves

(Continued on Page 8)

A MINIATURE GREEN HOUSE made of plastic over a framework of wooden strips pushes tobacco plants in this bed on the Southeast Pennsylvania Research Farm near Landisville Henry B. Engle, research agronomist with the US Department of Agriculture, working in cooperation with the Pennsylvania State University, shows how he uses bricks to hold down the ends of the plastic cover. Holes in the plastic are for ventilation. Additional ventilation is supplied by opening the ends on bright days. L. F. Photo.

Fruit Growers Plan Meeting

Lancaster County fruit growers will hold a twilight meeting on Thursday evening, May 21, at 7 p.m at Shank Fruit Farms, Farm No 2 on Long Lane, about one mile southwest of New Danville

A tour of the Shank orchards, conducted by Amos Rutt, manager, will present an opportunity to observe and hear about the orchard management which they successfully use.

Following the orchard tour, Mr. Larry Yeager, Extension Area Marketing Agent, will emphasize retail marketing problems He expects to give the present and possible future picture of the apple and peach producer-consumer situation.

Farm Calendar

May 18 — all day — Southeast District County Agents meet in Reading

May 18 — 8 p m — County 4-H Leaders Council meets at the Farm Bureau Cooperative building, Dillerville Pike

May 19 — 7 30 p m. — Lincoln Community 4H club meets at the Mount Airy Fire Hall.

8 p m — Drumore Community 4 H club meets at the Chestnut Level Church house

8 p m — Agriculture Committee of the Lancaster Chamber of Commerce meets at the Chamber's Office, Or-

DO YOU KNOW HOW MUCH MILK YOUR COWS CAN REALLY GIVE?

A cow is a factory. She eats grass, hay, silage, grain and Wayne Feeds. She makes milk. Each cow-factory has a certain bred-in capacity. When Bossy's assembly line isn't running at full capacity, she isn't making as much money for you as she should. ■ The way to find out if she's really running at full capacity is to put more feed in and see if you get more milk out. FEED HER ACCORDING TO WHAT SHE COULD GIVE TOMORROW, instead of what she gave yesterday. ■ Wayne can show you how to balance these larger feed intakes so that your cows can handle them. You feed the rumen bacteria too, so they can work harder and digest more roughage. ■ See us now for the Wayne Program that will work for you... choose from these quality Wayne Feeds... Wayne 32 Dairy Krums... Wayne Sweet Bulky... Wayne 14% Fitting Ration... Wayne Test Cow... Wayne Sucrene 16 Dairy... or other Wayne supplements and complete feeds to meet your needs... do it today!

It's your choice — take your pick — but for the full value for your livestock, consign to WALTER M. DUNLAP AND SONS — tops in livestock marketing service since 1898.

Listen to Dunlap market newscast Monday & Wednesday at 7:07 a.m. WLAN 1390

CAPABLE SERVICE TO THE LIVESTOCK INDUSTRY SINCE 1898

New Holland's Compact Hayliner 65 with optional Bale-Thrower lets you bale and load twice as fast with half the manpower.

Here's New Holland's economy baler with deluxe features, scientifically designed for high capacity and performance at low cost. Flow-Action feeding system "sizes up" windrows on the go for smoother, more accurate feeding of hay into each bale slice. Simplicity of design means fewer moving parts, so hay is handled less, saving valuable leaves.

New Holland's Compact Hayliner 65 makes easy-to-handle compact bales . . . just right for modern random loading. Coupled with the optional Bale-Thrower (PTO or engine), you bale and load in half the time it takes with manual loading.

The "65" is economical to operate and initial investment is less. With the "65" you can have a baler *and* a Bale-Thrower for the cost of a conventional baler alone.

STOP IN FOR DETAILS.

Weekly Broiler Report

Placements of broiler chicks for commercial broiler production in the Commonwealth during the week declined by 9 per cent from a week earlier according to the Pennsylvania Crop Reporting Service.

It was the first drop in four weeks. Placements were down 12 per cent from the comparable week last year. The 10-week total was 6 per cent below the same period last year.

Eggs set totaled 1,161,000 eggs, 8 per cent below the previous week and 5 per cent below a year ago The 3-week total was 1 per cent below last year.

Inshipments of broiler-type chicks for the past 10 weeks totaled 477,000 or 44 per cent above last year Outshipments of 1,319,000 were down 32 per cent.

Broiler chicks placed in the 22 major producing states were 1 per cent below the previous week and 4 per cent below a year earlier. Eggs set were 3 per cent below a week ago and down 2 per cent from last year.

EASTERN PENNA. & N. J. LIVE POULTRY

Supplies of heavy type hens limited with few sales @15 & 16¢ noted. Some lots were brought in by processors from outside areas to satisfy the only fair ready to cook demand. Offerings of light type hens irregularly light in some sections, increased & ample in others. Heaviest movement noted in parts of South Jersey & Central Pa Some plants more selective as to grade & quality than in recent weeks. Prices paid for light type hens held unchanged @ 7-8¢ mostly 7½¢

From Where We Stand . . .

Y'all Come Over To The White House

"We have an appointment at 1600 Pennsylvania Avenue at five o'clock tomorrow," said one of the officers of the National Farm Editors Ass'n.

This was pretty heady air for a little old barefoot farm boy like this writer.

But we got there all starry eyed at the appointed time prepared to get a distant view of, or hopefully a quick handshake with, the man who holds the most important job in the whole world.

Well, we did get the handshake — three times. If this seems odd, let us explain. We shook hands upon meeting President Johnson in the conference room in the Whitehouse After the short prepared talk, he walked over toward us and we shook hands again thinking this was the dismissal, but were greeted with, "Would you farm folks like to come into my office for a few minutes?"

Would we like to!!

Well, after about a half hour of chatting about crops, and weather, the strain of the presidency and the fast pace the president has been setting, and folksy news about the first family, President Johnson said casually, "I have a few minutes before I have to meet with some congressmen Would you all like to come over to the Whitehouse with me?"

Well, can you imagine our response?

We walked out through the rose garden, into the private rooms of the executive mansion and onto the elevator with the tall Texan. We were shown through the presidential bedroom, sitting rooms and other private rooms occupied by the president's family.

On the bedroom wall we saw the picture of the little share cropper's house where Lyndon Baines Johnson was born 56 years ago.

"I look at that picture every morning when I wake up" The president said, "Because I never want to forget where I came from."

When the time came for the President to meet with the congressmen, we shook hands again His remarks made us feel that he was sorry he could not spend the rest of the evening with us His southern hospitality was sincere, humble, and gracious

The visit with about 30 farm reporters might not have won him many votes, but it certainly didn't make any enemies It was a visit this reporter will not soon forget

We have to agree with one of our fellow writers who said, "I never thought it would happen to me."

At least that's how it looks from where we stand.

★ ★ ★ ★

Can It Be Solved?

Is the solution of the farm problem beyond human ability?

At least one U. S Congressman thinks so.

Representative Benjamin Rosenthal of New York City told the National Newspaper Farm Editors this week that the farm problem is not likely to be solved in the foreseeable future.

"The reason the problem has not been solved," said Rosenthal, a member of the House Agriculture Committee, "Is that we have entrusted the problem to rural legislators."

Rosenthal, who calls himself a reluctant member of the Agriculture Committee, said rural congressmen have not been able to present a united frontal attack on the problem. "You need a third party," he said, "and the city legislators are not anxious to be that third party"

Rosenthal said there is no longer a "farm block," and no farm program can be passed without the help of city congressman.

In the past, he said, rural members of congress have told us (the urban congressmen) that we did not understand the problems, and that we would have to accept their programs or none at all.

"If the rural members of congress will accept us as equals on committees and let us help in the formulation of programs, I think we can make some progress," he said

He continued, "Rural legislators are trying to perpetuate two myths. We have been told that without programs the farmers will go down the drain and the ripples in the economic lake will take the rest of us with them This is a myth

"Farm legislators still believe the family farmer is the great American hero. This too is a n th. I think the family farm is dead. Farming has become a big industry"

Rosenthal continued, "Farming must recognize that capital is now more important than labor, and we are going to have to treat farming just like any other business."

While we certainly can not agree with all Mr Rosenthal said, we must realize he spoke the truth when he concluded, "Without city congressmen no farm bill can be passed and city congressmen are becoming more and more reluctant to pass farm legislation"

At least that's how it looks from where we stand.

WILL HISTORY REPEAT HERE?

The average age of the world's great civilizations has been 200 years. These nations progressed through this sequence·

From Bondage to spiritual faith
From spiritual faith to great courage
From courage to liberty
From liberty to abundance
From abundance to selfishness
From selfishness to complacency
From complacency to apathy
From apathy to dependency
From dependency back again to Bondage

In 16 years our United States will be 200 years old This cycle is not inevitable — it depends upon YOU!

THE BIBLE SPEAKS

International Uniform Sunday School Lessons

BY DR. KENNETH J. FOREMAN

Take A Stand

Lesson for May 17, 1964

Background Scripture: Proverbs 23:29-35; Matthew 18:5-14; Romans 13:11 through 14:23.
Devotional Reading: Psalm 40:1-8.

THE BIBLE was written in a simpler era than ours. Many people would think the Bible world ideal. At least it would seem like a world which lacked many of what are now often considered sources of human evils. It was a rural world; in Palestine there were comparatively few cities and none that would be recognized as such today. It was a world where alcoholic drinks were everywhere used even by the best people. It was a time before the invention of whiskey and other beverages high in alcoholic content. Drinking was confined to wines and beer or their equivalent. It was an age without motor cars or machinery, a leisurely hand-crafting age. Yet even in that world, the writers of the Bible had something to say about drinking. The point of all this is: If alcoholic drinks were known to be dangerous in a simple rural world, how much more dangerous it can be in our complex civilization!

Dr. Foreman

The speed of the problem

There was once a stage magician who used to say over and over as he was doing his stuff, "It's the speed of the problem and not the problem itself." Something like that is true of the world we live in. This has a great deal to do with the alcohol problem. For instance: Time was when men would gather in taverns or at parties, just as they do today; and some of them would get drunk, as many do today. But when the party was over, in the good old days the friends of the man who had had too much would dump him into his wagon and get the horses started. That animal knew his way home and (being sober) knew enough not to speed. (Did you ever hear of horses organizing a race meet by themselves?) But nowadays—whoosh!!! That noise you heard was the sound of our friend who was just telling us that one more drink couldn't do any harm. He took off in his high-powered car and he's likely to be a statistic by morning. There's nothing funny about this. It happens. Now the stories reported don't always tell the whole truth; but the police will tell you if you ask them that alcohol figures in many smash-ups on the highways.

Why men drink

It is said often that the real problem is not drinking itself, but in the question: What drives men to create for themselves a drinking problem? Again the speed of our civilization has something to do with it. The intensity of competition, tension on the highways, tensions at home, the sense of being pushed all the time, get on a man's nerves and he starts to drink just a little more and a little oftener than he would have otherwise; and the first thing he knows, he not only has all the worries that pushed him at the outset, but he has the alcohol problem besides. Every problem drinker you find is (perhaps unconsciously) expressing hate and contempt for the kind of civilization he is forced to live in Rather than contribute to it or to work for a better kind of life, he tells the world a rude, crude farewell, all he thinks of is to get out So he takes the route of temporary suicide. There's no essential difference between a man who seeks refuge in alcohol and one who seeks refuge in opium or marijuana.

Well, somebody says, you are talking about alcoholics. Yes, and more besides. Alcoholism—if we call it a disease—is a disease more widely spread than any other disease in America except three and the number of alcoholics is increasing yearly.

Now Is The Time . . .

BY MAX SMITH

MAX SMITH

To Destroy Ivy Poison

This plant causes considerable discomfort to many people each summer, those who are extremely allergic to ivy poison suffer varied complications The plant may be destroyed by spraying or sprinkling with any form of 2,4-D weed killer or with amino triazole Land owners with ivy poison growing should make a special effort to spray the area once or twice each spring

To Clip Pastures

Good pasture management states that the area should be mowed after each grazing period; after the animals have eaten down the current growth, the clipping will remove the mature growth, keep weeds from developing, and encourage new, more uniform growth of grasses and legumes. As the grasses and any weeds go to seed, it is important that they be mowed in order to get new growth and to keep the weed seeds from developing.

To Use Atrazine Sparingly

Corn growers who are using atrazine to control grassy weeds should keep in mind that too much atrazine in any one area might damage the next crop. We often see this result in small grains where the sprayer was allowed to deliver too much material while stopped for repairs Also, if a cover crop is to be planted this summer (ryegrass or bromegrass), the atrazine will prevent seed germination. Some growers only spray over the row with atrazine in order to permit a cover crop to grow between the rows.

To Seal Silos

After grass silage or hay has been put into the silo, it best to make some effort seal out the air and prevent spoilage In the upright silo this may be done with several loads of poor quality forage weeds, or with plastic material For the horizontal silo the use of black plastic weighted down has given good results The seal should be put down within 48 hours after the silo is filled

Landscape shrubs and trees need different amounts of sun and vary in their resistance to poor drainage and to drought

Farm Prices Down 3%

Prices received by Commonwealth farmers in mid-April for farm products declined 3 per cent from mid-March, according to the Pennsylvania Crop Reporting Service. The usual seasonal decline is 2 per cent.

Contributing most to the decline were lower prices for wholesale milk and eggs. Partly offsetting were higher prices received for potatoes and apples coming out of storage.

Letters To The Editor

County Farmer Disagrees On Wheat Editorial

Editor: Lancaster Farming
Dear Sir,

In the Editorial, "Wheat Farmers Decision," May 2, 1964, it was implied that to participate in the 1964 Wheat program was in reality a vote for the program

I CANNOT agree with this view Because one goes through the necessary procedure to receive an income tax refund does that mean he is in agreement with any or all of the income tax program?

Can one AVOID paying taxes on his income BY NOT applying for the tax refund?

By NOT participating in the wheat program, can anyone AVOID the payment for wheat certificates and yet get his wheat milled or exported for human consumption?

Can we, the farmer, change or remove the law by NOT participating in the program?

If a farmer participates in the wheat program does that REQUIRE him to VOTE for it or prevent him from speaking out against any or all parts of it?

Because a dairy farmer complies with inspection requirements does that mean he is in agreement with these requirements?

My answer to all these questions is NO! Therefore I cannot agree with your views that to participate in the wheat program is a vote for it

Yours truly,
Henry L Young
Peach Bottom

Co. Plow Meet Is Scheduled

The third annual Lancaster County Soil Conservation District plowing matches will see county plow jockeys turning furrows on July 23 if weather permits Rain date has been set for July 27

The date was set Monday night at a district committee meeting at the Lancaster County court house

Henry E Givler, district secretary, said Monday night that the annual field day of agency exhibits is expected to be held at the same date and place. The site is expected to be announced before the committee's Monday, June 8 meeting, Givler said

The plowing winner will qualify for the state contest to be held Wednesday, July 29 at Ft McCord, Franklin County.

Protection NOW insures Production LATER!

Purina Pura-Mycin helps protect your layers against dreaded CRD, Blue Comb and Synovitis . . . diseases that can spell trouble for your egg production and profits. Easy to use! Just add Pura-Mycin to drinking water. It mixes easily and completely, holds its germ-killing power for several days, doesn't upset drinking habits.

Economical, too! Costs only about 18¢ to medicate a gallon of drinking water with Pura-Mycin.

Protect your layers by investing in Purina Pura-Mycin now. The added health protection could pay for itself many times over in continuous egg production all winter.

Ask for this Terramycin* base Health Aid at our store. Call or drop in today!

Family Farm May Have To Go, Food Commission Official Says

WASHINGTON — A Wyoming Senator told Newspaper Farm Editors Monday, 'Maybe the feed lot operator and the small family farm should be forced out of business, but we ought to ask questions, we ought not just let it happen"

Senator Gale W McGee told the farm editors at their annual spring conference, the proposed Food Commission Study may show the need for new legislation concerning food buying practices or it may call for the tightening of existing laws

He said the proposed 15 man commission, five from the Senate, five from the House, and five from the general public, should attempt an exhaustive but not petty" study of food marketing practices

'The pressure is now on meat which makes up about a third of the chain stores' volume, and would probably make a good pilot study," he said

He explained that the chain stores could not lower their costs of soaps, detergents and manufactured foods from large firms by volume purchases, therefore the temptation is great "to take it out of the hide of whoever you can brow-beat"

He said the proposed $2½ million study has been supported by all three large farm organizations as well as the meat packers, feed lot operators, labor unions, cooperatives, National Association of Manufacturers, most chambers of commerce, the National Ass'n of Independent Businesses, and finally the food chain stores.

Turkey Feeding Program Tops!

12 DIFFERENT TURKEY FEEDS TO MEET THE NEED OF EVERY AGE AND CONDITION
(Available in Mash - Crumbles - Pellets)

News Flash!

Tests Show Feeding Pre-mixed Feeds Out-perform Free Choice Feeding By .60 Pounds More Gain Per Turkey With a .76 Better Feed Conversion.

It seems turkeys are not very smart when it comes to balancing their diets. At least that's what Cooperative Research test findings show.

In recent tests, concentrates and corn were fed free choice to groups of turkeys. The results obtained from these birds were compared to those of turkeys fed pre-mixed and pelleted feeds.

The tests of both hens and toms, from 12 thru 24 weeks, showed: free choice feeding — 9.4-pound gain with a 5.36 feed conversion; feeding pre-mixed and pelleted feeds — 10-pound gain with a 4.60 feed conversion.

In the tests, pelleted feeds, like Cooperative Mills Turkey Pellets, proved to be more economical and practical.

Tests like those just mentioned are only a small portion of the research program at the Turkey Research Farm. With facilities for more than 15,000 birds, there is plenty of room for the study of every phase of turkey production. That's why you can be sure of getting the best when you buy Cooperative Mills Turkey Feeds from Farm Bureau.

"WE SELL TO ANYONE"

Poverty

(Continued from Page 1)

at breaking this cycle; therefore, the emphasis is on youth

The most striking fact in our findings, Sundquist said is the correlation of lack of education and employment. Nearly half the non-white residents of the nation are in the under $3,000 group while only eight per cent of the people with some college training could be called poor More than a third of all people with less than an eighth grade education earn less than $3,000 and nearly 40 per cent of all farm families are in the low group.

But when you combine these factors, he continued, the figures are startling About 80 per cent of the non-white farmers in the nation can be called poor, nearly half the families whose head is a woman are so classed, and the family headed by a non-white woman with less than an eighth grade education has a 96 to 4 chance of being in perpetual poverty

He said the bill is aimed at helping the 730 000 young people, between the ages of 16 and 21, who are out of school and unemployed

The bill has been called an up to date version of the Civilian Conservation Corps and the National Youth Administration Title I has three parts 1, Job corps with conservation camps and residential training centers, 2, Work-training program designed to help youth work their way through high school, and 3, Work-study program designed to help students from low income families get post-high school education

Sundquist said the program would be implemented through an intensive recruiting drive "No kid anywhere will have to stay out of school because of funds," he said.

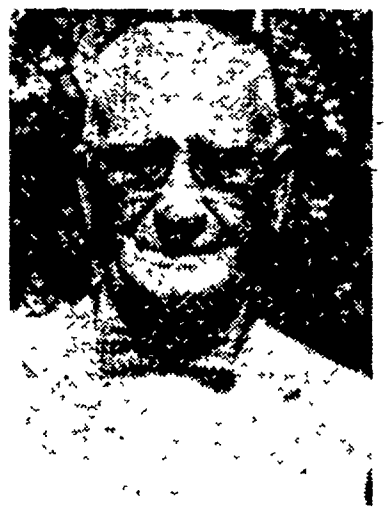
The next meeting will be held on June 10 at the home of John Brennamen, Kirkwood R1 A judging practice will be featured

Early maturing crops in a garden should be planted adjacent to each other, so that a worthwhile area will be available for succession crops to follow.

A Great DAIRYMAN and FEEDMAN

ALTHOUGH HE retired several years ago as manager of the dairy feed division, of one of the National Feed Co., D. H. (Dan) Van Pelt, of Kinderhook, N. Y., still closely observes the pulse of the dairy and feed businesses as consultant for D. E. Horn & Co., York, Pa.

IN MY 37 YEARS of work with people engaged in the feed business, Van Pelt is one of the very few who possess a gifted knowledge of dairying and salesmanship. Over a span of 45 years of service with four nationally known feed manufacturers, he built an enviable record of sales upon a background of ingenious work with dairy cattle.



D. H. VAN PELT

A NATIVE OF Audubon, Ia., Van Pelt secured his advanced education at Iowa State College, and moved into dairy farm management. Within the period of 1906-14, he served as manager of the dairy department of the Hartman Stock Farm, Columbus, O, the Van Camp Condensery, Perry, Ia, and the Hilltop Farm, Spartanburg, S. C.

IN 1914, WITH characteristic foresight, and visioning a great future for the livestock feed business, Van Pelt made the quite natural transition to that field. In the years that followed, many well-known feed manufacturers benefited from his services.

IN HIS SERVICE to dairymen via the feed supply route, Van Pelt pioneered a number of new approaches for feeding dairy cattle, among them being formulation of the first prefreshening feed, the first special feed for dairy sires, the first calf program combining a complete milk, pellet and grain ration, a new concept for dairy feed of coarse or open-type texture flakes and pellets and his latest method complete pelleted rations. He applied nature's way to drying up cows, formulated and developed a natural purge program, and originated the Van Pelt method of appraising milk production ability by physical characteristics of the animal. Many top dairy breed production records resulted from his feeding program.

DEALERS AND FEEDERS always had a warm welcome for Van Pelt. They liked his congenial disposition and good humor, his enthusiasm and his willingness to help solve feeding problems. He personified service and sales to a degree seldom found among feedmen As long as he lives, he'll love to talk about cows and methods for feeding them. He is truly, a great dairyman and a great feedman—A. W. C.

(Continued from Page 1)

about the diameter of a lead pencil

Higher temperature and humidity under the plastic probably accounts for much of the difference, Engle believes Temperatures during the daylight hours have averaged seven to ten degrees higher under plastic than glass, and the temperatures reached desirable ranges much earlier in the day

Humidity under the plastic ranges much higher than under glass Watering does not need to be done as often or as heavily. The plants under the plastic have been watered only three times since April 10, and the sprinkler was used only about 15 minutes each time. The muslin covered beds have been soaked six times and for longer periods The sash covered beds have also been watered six times, but because the sash must be removed, watering was done by hand—a definite disadvantage, Engle believes.

Engle said this week he has had much better results this year, the third for the experiment, mostly because the framework over the bed is better constructed. During the first two years, Engle used plastic tubing as supports for the plastic cover. The plastic was brittle and suffered wind damage.

This year wooden lattice strips were used. The lateral pieces are 1¼ x ¼ inch by eight feet long. "This is about the right length for a six foot bed," Engle said. Thirteen were used for a 50 foot bed.

The wooden strips were treated with a Copper Naph-

PLANTS UNDER MUSLIN GROW MUCH SLOWER than under plastic. Compare the size of these plants with the size of the plants in the next bed, (picture on page 8). Beds were seeded on the same day with the same kind of seed Beds covered with muslin have been watered more frequently and with more water than those under plastic. L. F. Photo.

(Continued From Page 8)

thenate preservative to prevent rotting at ground level. Pentachlorophenol preservative should not be used because it gives off fumes which burn the small plants and cause irritation to eyes.

With the lateral framework connected to a ridge pole of the same size lattice, the entire structure becomes very wind resistant when covered with plastic.

Engle used 4 mil plastic this year He believes the plastic can be stored and used again next year He plans to close the ventilation slits with masking tape next spring when the beds are seeded The tape can be stripped off when the beds need ventilation

Ventilation is one of the major problems with the system. Unless there are slits in the plastic along the sides of the bed, and the ends can be opened during bright days, some plant scalding will occur near the center of the bed.

Temperatures rise quite quickly during bright days Temperatures of 110 degrees for a short time will not harm the plants, but 100 degrees is better, Engle said.

He plans to remove the cover entirely when the plants are about two-thirds of field size, probably about May 20 This will give the plants time to harden before going to the field

Engle sees the system as especially good for the Penbel 69 variety of tobacco which needs a longer growing season than some other varieties. The plants can get in the field earlier and mature before danger of frost

But Engle sees two other possible advantages to the plastic covered beds In areas where snails are a problem, the plastic appears to be a barrier to the pests.

The plastic may also be some help in preventing blue mold which is an air-borne disease The covering of the beds helps prevent infection by the drifting spores of the disease.

The program is still somewhat experimental, Engle said, but it may well be a real step forward for those growers who would like to get the plants into the field early.

Grass plays an important role in controlling erosion on 906 million acres of cropland, pasture and rangeland in the United States.

● President Sees

(Continued from Page 1)

money shipping beef to the United Kingdom as to the U S. "This has come about in the past three or four weeks"

'The price is right and Europe is very short of beef We are going to export some beef to Europe," he said, "If we can get Europeans to accept our kind of beef"

Winn Finner, staff economist with the USDA, pointed out a drop of $3 70 in beef prices from 1962 to 1963 Approximately $3 00 is directly a result of increased domestic production, about 50 cents to increased imports and about 20 cents to an increase in production of broilers, pork and other meats.

He said the Federal Government has a five pronged attack on the beef problem the purchase program, beef promotion programs, the food commission study, possible increased exports, and trade agreements

"We have never said imports are the biggest problem," Lyle Liggett of the American National Cattlemen's Association said "There are three major problems — imports, numbers and tonnage"

Numbers of cattle presents no real problem unless a drought should force bunched marketings, he said. Tonnage can not be changed without a change in attitude or grading, or a shortage of feed supplies. There will be no change in tonnage as long as farmers are used to feeding up the crop"

'Maybe we can't do anything quickly about numbers or tonnage, but we can do something about imports," he concluded.

Harvested forages — hay, silage and green chop — make up about 15 per cent of all feed consumed by livestock

Add A Dash Of Herbs For Taste

By Mrs. Richard C. Spence

SPENCE

Salt and pepper are standard seasonings, but ever since the time of Columbus, men have searched for new ways to enchance the taste of food

Today gourmet cuisine is set apart by its masterful touches of seasoning You can duplicate the subtle flavoring of the very finest cuisine right in your own kitchen It isn't difficult to creat new tastes for old favorites such as meats, vegetables, soups and breads, when herbs and spices become a reliable part of your food preparation tools

Although there are only so many foods around, the number of ways to vary them could keep you busy for a lifetime. Spices and herbs are used to enhance the natural flavor of the food, never to disguise it.

Start out on your first few ventures with herbs and spices by following recipes which have been well tested. When experimenting, a good rule of thumb is to start with one-quarter teaspoon of a spice or herb. It is easier to add another small amount than to be faced with the problems of over-seasoning.

FIVE KINDS OF SEASONERS

1 Spices — obtained from the bark, root, fruit or berry of perennial plants. (For example, cinnamon from the bark, ginger from the root, nutmeg from the fruit, pepper from the berry.) Spices are used whole as well as in ground form.

2. Herbs — These are the leaves—never the stems—of annual and perennial low-growing shrubs. Chervil, dill weed, marjoram, parsley, rosemary, sage, sweet basil, tarragon, thyme, etc.

3 Aromatic seeds — The seeds of annual plants which may be used either whole or ground· anise, caraway, celery, coriander, cumin, dill, fennel, mustard, poppy and sesame

4 Seasonings — Generally, the term seasonings covers blends of spices and/or herbs and/or seeds and/or salt Although they may be blended for one specific purpose, they lend themselves to multiple uses Poultry seasoning, Spaghetti sauce seasoning, Chili powder, Curry powder; Salad herbs etc

5 Vegetable spices — Garlic (chips, powder, salt and seasoning powder), bell peppers, paprika, chili peppers or pequins, cayenne; horseradish; onions (powder, salt, instant minced, instant toasted, shredded green); powdered mushrooms.

* * *

Almost any of the herbs can be used interchangeably or blended together in recipes. Thyme, savory, marjoram, basil or bay leaf can be used to vary stuffing. Basil, with its delicate flavoring, is often flavored for egg dishes, but there is no reason why you couldn't try it in soups, with lemon on fish, or crumbled and sprinkled on tomato slices Herbs can be blended with butter or bread and biscuit dough when French bread, heated with garlic and butter, has lost its novelty.

Replacing butter on cooked vegetables, herbs have extra dividends for those on low fat and salt-free diets. The psychological need for salt is not as great when other seasoning is there to take its place

After picking, herbs are perishable and need to be used quickly to be at their aromatic best Some women who grow plants on kitchen window sills have found it profitable to keep a few pots planted with rosemary, thyme, basil, marjoram, sage and parsley. Need a pinch of something? Pinch it yourself But don't forget to crush your fresh-grown flavoring as you use it, to get its full benefit

When buying a packaged spice or herb, learn to look for strength and color A fresh, rich color and pungent aroma that rises to meet you. mark highest quality. Since they gradually lose color and flavor, you get no bargain when you buy a large quantity in a bag. Smaller, tightly sealed containers are best for the average homemaker Frequent replenishment assures you of best quality for cooking.

Spices and herbs should be stored in a cool, dry place, never right over or too near the range. Once containers are opened, herb flavor begins to wane. If they are properly stored, the few ounces of herbs in tightly closed containers retain good flavor and color for several months.

Herbs tend to lose flavor a little faster than most spices, but they are used in greater amounts If you buy them in leaf form and crush them as you use them, they will keep their flavor longer. Ground spices should be replaced within six months, while whole spices keep their flavor almost indefinitely

Whole spices are especially useful in dishes which cook a long time, such as stews They should be added at the beginning of the cooking period to extract their full flavor and aroma. Add ground spices and herbs about 15 minutes before serving. In uncooked dishes, such as salad dressings, fruit juices or cottage cheese, the spice or herb mixture should be left standing for several hours to develop maximum flavor.

No one can say how much of any spice or herb you will prefer to use—no one but you and those who will eat what you prepare. Since the pungency of

(Continued from Page 10)

each seasoning differs, and its effect on different foods varies, there is no hard-and-fast rule for the perfect amount.

To avoid disaster and achieve perfection every time, simply follow the "do's and don'ts" below

DO—Use restraint In general, ¼ teaspoon of dried herbs or spice is sufficient for 4 servings

—Crush herbs in palm of hand before adding to your recipe, but after measuring.

—Add dried herbs and seasonings to salad dressings, fruits and juices well in advance, to allow flavors ample time to "marry."

—Balance your seasonings. If your main dish is emphatically flavored use a light hand on your salad and keep both vegetable and dessert quite simple.

DON'T — Use dried herbs in the same quantity as fresh (Their flavoring quality is more intense) In most cases, 1 teaspoon of dried herb is the equivalent of 3 teaspoons of fresh.

—Use too many different seasonings in one dish, unless called for in a thoroughly tested recipe.

—Add dried herbs and seasonings to cooked foods until the last hour of cooking.

—Use herbs or spices in every dish or course

* * *

And now for some recipes to try.

FRENCH HERB OMELETTE

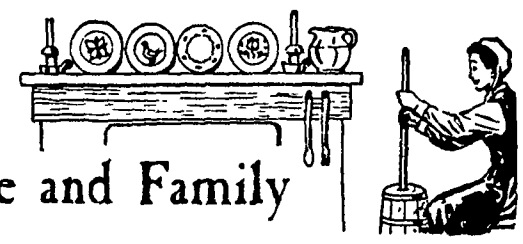
¼ teaspoon shredded parsley
¼ teaspoon thyme
¼ teaspoon basil
2 tablespoons cream
2 eggs, slightly beaten
¼ teaspoon onion powder
⅓ teaspoon salt
Dash black pepper
1 tablespoon butter or oil

Crush herbs, soak in cream 10 minutes Add eggs, onion powder, salt and pepper Heat small omelette pan (skillet with curving sides) Add butter and as soon as it's sizzling, add egg mixture all at once Work quickly, tipping the pan away from you and lifting the edge of mixture with a spatula so that uncooked mixture will flow underneath When the egg has barely set, and is still moist in the middle, fold and turn out onto a hot plate Garnish with parsley and serve at once A true French omelette is only slightly brown Makes 1 serving

OLD HICKORY HAMBURGERS

1 pound ground beef
1 teaspoon onion powder
½ teaspoon monosodium glutamate
1 teaspoon old hickory smoked salt
¼ teaspoon fine grind black pepper

Mix together ground beef and seasonings Let stand an hour or so for flavors to blend Shape into patties Pan-broil, cook on grill, or barbecue Serve hot Makes 4 servings



For the Farm Wife and Family

Ladies, Have You Heard? . . .

By: Jane Thurston, Extension Home Economist

THURSTON

Menu Ideas To Please The Family

It takes preplanning and imagination to stimulate the appetite and reduce the number of food likes and dislikes of family members Some ideas worth trying when planning menus include

If you don't usually serve an appetizer, serve one Clear soup in a mug or cup, fruit cocktail, or a small serving of tossed salad is always interesting

Instead of fried or broiled chops, try stuffed baked pork chops or lamb chop casserole Minute steaks, stuffed flank steak, or kabobs are tasty and different Use chopped meat in meat loaves, chili con carne, or with spaghetti and macaroni

Dress up a vegetable with a cream sauce or herb butter sauce For calorie economy when making a cream sauce, use either the cooking water from the vegetable or skim milk instead of whole milk

For a change in bread, surprise the family with hush puppies, garlic or herb bread, or hot biscuits

Include raw cauliflower, carrots, and spinach in your salad food list

For a simple dessert after a heavy meal, try a fruit and cheese platter, ambrosia, or spicy baked apples

About Staystitching When Sewing

Staystitching keeps bias or curved edges from stretching as you work on garment pieces

Follow the pattern instructions for staystitching properly Staystitch as you remove pattern pieces from the fabric

Staystitching is a single row of regular machine stitching through a single thickness of fabric within the seam allowance It should be about one-eighth of an inch from the seamline and in matching thread

To prevent stretching, armholes, necklines, shoulder seams, waistlines, bodice side seams, and the upper portion of skirt side seams should be staystitched

Staystitch in the direction of the fabric grain to hold the cut edges in their original cut shape

Staystitch from the wider section of a pattern to the narrower For example, staystitch shoulder seams from the neckline to the armhole

Worth Trying Anytime

Enhance the flavor, texture, and color of casseroles with a topping of almonds near the end of baking time The al-

DO YOUR COWS

OWE YOU MONEY?

If your cows aren't producing up to their full capacity, they do. Here's how to get what they owe you: Put 'em on Pioneer, **the feeds with balanced amino acids for better protein building.** Amino acids are the basic building blocks of proteins. When they're balanced, you get top production, top profits. The people at Pioneer know this because they've put more than 90 years into scientific research and development. That's why Pioneer will help you challenge your cows to produce up to their bred-in ability. It builds big, healthy calves that develop into high-producing, high-profit milkers. And when dry cows freshen, Pioneer gives them the nutrients they need for producing more milk than before. So let us help you collect more money from your cows. Stop in or phone soon.

Secretary Says Farmers Need To Convert Land

WASHINGTON — "Until land is moved out of production into alternative uses, there will be a need for commodity programs," Secretary of Agriculture Orville L Freeman told Newspaper Farm Editors Association members, Tuesday.

Freeman predicted that recreation will be the largest single income producer on the farm in 20 years He said we need a broadened economic base for rural America through rural development programs coupled with food programs to Imaginatively and creatively use our abundance for the good of the public"

Freeman roasted the leadership of the American Farm Bureau Federation for what he called "A complete disservice to agriculture and to members" for the organization's action in opposition to the recently passed cotton-wheat bill

He said members of the AFBF were "running up and down the hill with a loaf of bread carrying the label 'Bread Tax,' " in an emotional play on the prejudice of the consumer against the farmer

'We do not need to feed the prejudices of the consumer. I cannot understand their action. I believe it was a complete disservice to both the cause of the farmer and to members of the organization," he said

The Secretary said the AFBF was the only major farm organization not in support of the legislation

The attack came in answer to a question, "Does the coalition of farm organizations in support of the farm bill mean the demise of general farm organizations?"

Freeman said he feels that the farm organizations are becoming stronger and more powerful, but that there appears to be an effort on the part of most of the farm groups to present a united front on legislation

Farm Editors Present Awards

WASHINGTON — The Newspaper Farm Editors, Monday night, awarded the J S Russell Memorial award to Rex Conn, farm editor of the Cedar Rapids, Iowa, Gazette, and Bill Durham, farm editor of the Houston, Texas, Post

The award, in memory of the first president of the national organization, is awarded each year to a member for distinguished service to agriculture The late J S Russell was longtime farm editor of the Des Moines Register and Tribune

The farm editors, meeting in their annual conference with members of congress, farm leaders and others, presented the awards at a Monday night banquet at the National Press Club.

Nancy Johnson in 1846 invented the hand-cranked ice cream freezer

(continued from page 11)

monds will toast to a golden brown in just a short time.

Keep crisp cookies in a tightly covered container to retain their crispness. If they become soft, put them in a three-hundred degree oven for about five minutes.

For a quick and easy dessert, make a vanilla sauce following the directions on a package of pudding mix. Then alternate layers of ladyfingers, drained canned apricot halves, and the sauce in a serving bowl or dessert dishes Chill about two hours before serving.

Add an interesting note to any vegetable salad with zippy onion dressing Make in minutes and instant minced onion, mayonnaise, a little Worcestershire sauce, salt, pepper, and garlic powder.

The feller who agrees to meet us half way is often a poor judge of distances

Random Sample Chicks Hatched

HARRISBURG — A total of 9,141 chicks, representing 32 entries from 13 states, have been hatched in the 1964-65 Chicken Random Sample Test of the Pennsylvania Department of Agriculture.

Of the 11,976 eggs set early in April, 82.6 per cent hatched —the best hatchability record in the eight-year history of the test, according to E. J. Lawless, chief of the department's Poultry and Egg Division. The previous high was 82.3 per cent in the 1961-62 test

Lititz-Manheim 4-H Organizes

The opening meeting of the Lititz-Manheim 4-H sewing club was held recently at the home of the local leader, Mrs. David E. Buckwalter, Lititz R3.

The officers elected were as follows: president, Judy Buckwalter; vice president, Reba Shelly; secretary-treasurer, Judy Rohrer; song leader, Doris Jean Keller; game leaders, Beverly Rohrer and Gloria Diffenderfer; news reporter, Margaret Grube; and county council representative, Mary Alice Graybill.

There were 20 members present The leaders are Mrs. David Buckwalter, Mrs. Rodger Ledyard and Mrs. Russell Rohrer

Mrs Buckwalter gave instructions on choosing the right pattern and material.

The next meeting will be held May 22 at 7:30 at the home of Mrs. David E Buckwalter.

Muffin tins can be used to bake apples and green peppers.

Fulton Grange Present Degrees

Fulton Grange met Monday evening May 11 at the Grange Hall, Oakryn First and second degrees were conferred on the class of new members.

The charter was draped in memory of Mrs. Clara M. King of Strasburg who was a member of the Grange for 57 years

Plans were made to attend the Lancaster Pomona Grange visitation meeting May 19 at 8 p.m. in the Kirkwood IOOF as guests of Colerain Grange.

On May 21 and 23 Fulton Grange will present a variety show, "Hobo's Highway," at the Grange Hall, Oakryn, public invited

At the next meeting, May 25, the third and fourth degrees will be conferred.

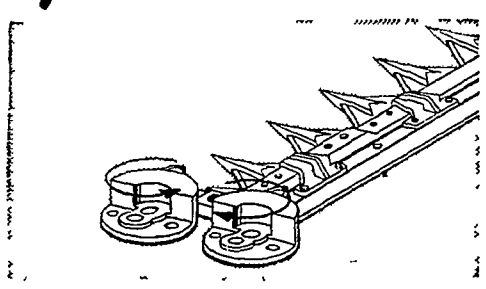
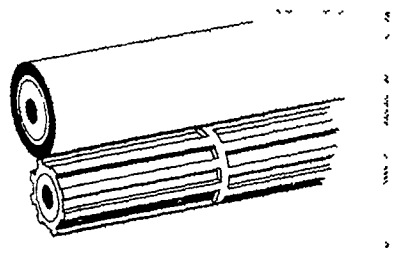
CURE-RIGHT HAYING... *fast*

Haymaking has now become fast, easy and smooth the Allis-Chalmers way—with equipment for producing top quality on every farm, in every type of hay. For example, cracking *lightly*, just enough to break the wax coating on the hay stems, is the secret of Allis-Chalmers hay conditioning. Hay plants come through limp, but complete—not chopped or mangled.

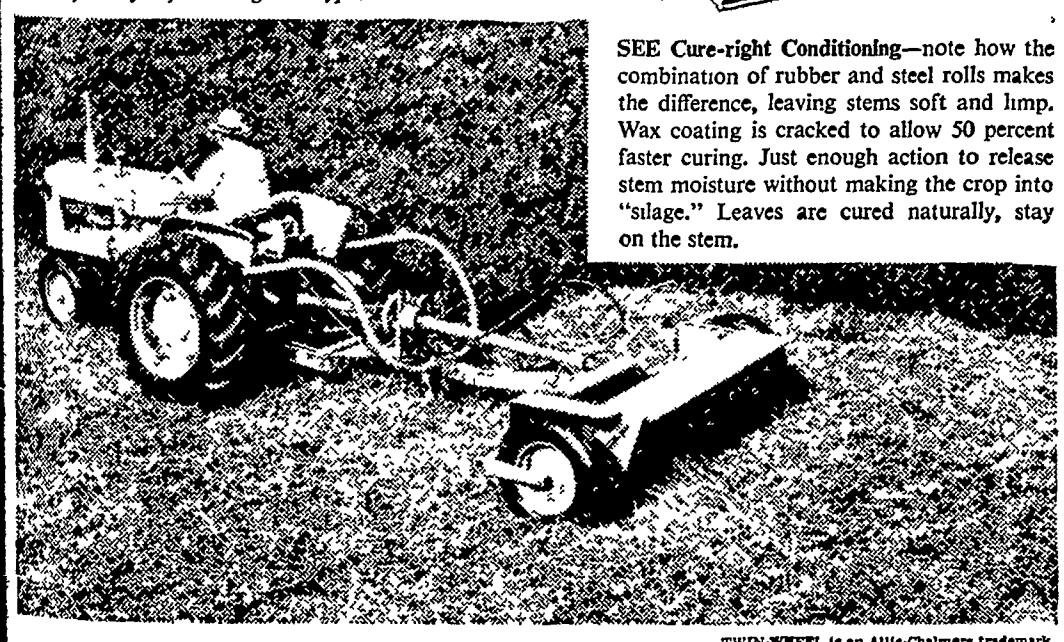
Note below the new Allis-Chalmers Hay Conditioner Hitch. This is the "wishbone" that trails a conditioner so surely and easily any need for a second tractor and operator is eliminated. Ideal for use with all 80-Series mowers, all styles, including trail-type.



LISTEN—no-chatter, pitmanless mowing is quiet . . . with smooth, non-stop rotary action. New Allis-Chalmers mowers for 1961 provide one-piece, reinforced cutter bar design . . . heavy crop durability in the TWIN-WHEEL drive mechanism. New outer shoe loop divider speeds mowing of rank or tangled growth.



SEE Cure-right Conditioning—note how the combination of rubber and steel rolls makes the difference, leaving stems soft and limp. Wax coating is cracked to allow 50 percent faster curing. Just enough action to release stem moisture without making the crop into "silage." Leaves are cured naturally, stay on the stem.



TWIN-WHEEL is an Allis-Chalmers trademark.

Choice of three 80-Series mowers available—side-mounted, rear-mounted, or trail-type. Three models of Allis-Chalmers rakes—parallel bar 77, rear-mounted or ground drive; also No. 7 Pull-Type Side Delivery Rake and Tedder.

Ask us about the Allis-Chalmers plan to finance your time purchase of farm equipment.

Get the dollar-making difference with ALLIS-CHALMERS SALES AND SERVICE

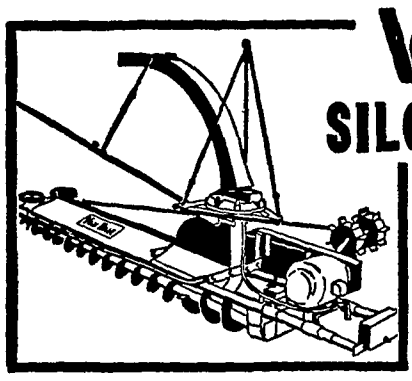
Complete automatic feeding for DAIRY COWS and CATTLE!

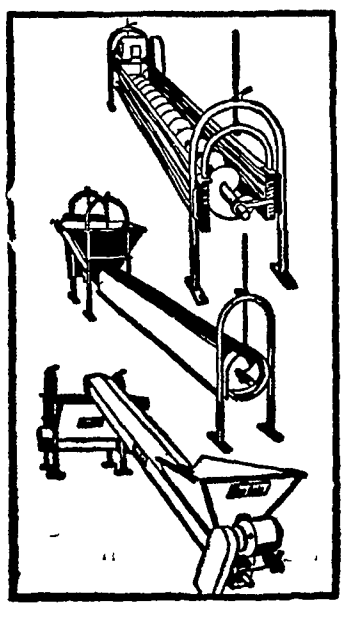
VanDale SILO UNLOADERS



Double augers deliver more silage per minute even when silage is deeply frozen . . . and at a lower operating cost. Patented V-paddle impellers *throw* . . . not blow . . . silage down chute. Adjustable drive hubs give positive traction in all types of silage.

Three-point suspension keeps unloader level at all times.

Plus a complete line of bunk feeders to meet your exact needs



Straight-out Auger Feeder

With VanDale units you can custom build the bunk feeding set-up to fit your needs. Drive section includes hopper, drive assembly and 10', high capacity 9" auger. Additional auger sections are in 10' units and are easily coupled.

Feed-R-Flo Bunk Feeder

The new, all-metal complete feeder. High capacity 9" auger rotates within tube. Gives all-weather protection, even feed distribution, and lower operating cost.

Conveyor Trough

An important link in automatic feeding. Positioned below silo chute, the VanDale conveyor trough carries the silage to the bunk feeder. Primary section includes hopper, drive assembly, and 10', 9" auger. Additional 16' auger sections may be added.

See us for modern automatic feeding equipment

How balanced amino acids help you balance the books... at a profit!

All producers naturally want to get greater returns on their investments. With Pioneer dairy feeds, that's exactly what happens. You get hidden extras when you're feeding Pioneer, because Pioneer makes **the feeds with balanced amino acids for better protein building.** Here's how they work: Amino acids are the basic building blocks of proteins. When they're balanced, you get top production and top profits. That's because you'll be challenging your cows to produce up to their bred-in ability. But in addition to production and profits, Pioneer gives you more than 90 years of experience in the feed business. That experience goes into an extra "plus" for you: **service and ideas,** to help you develop the best feeding program for your herd. Call or stop in soon. We'll show you how you can balance the books . . . at big profits.

BURLING'S
Golden Sex-Links
and
Harco Sex-Links
for
- Big Brown Eggs
- Terrific Production
- Wonderful Livability
- Good Feed Conversion

The Golden Sex-Links are produced from specially selected White females, while the Harco Sex-Links are from Harco Barred Rock females, both mated to Harco R. I. Red males direct from Harco Orchards breeding farms. Both Crosses are high-powered brown egg champions.

DORMANT SPRAYS

Dormant sprays are mainly for the control of scale insects, say entomologists at Penn State University. Apply them to trees and shrubs before growth starts in the spring.

WHO TALKS TO COWS?

We don't! But, we talk to dairy farmers. And not just once in a while, either. We talk to dairy farmers every day. What do we say? "How's milk production?"

What have we learned? That Green Pastures Dairy Pellets are the best value you can buy in a milk producing feed. Of course we aren't satisfied with it, yet, and we keep looking for ways to improve the best. That's why we keep talking to farmers. We'll appreciate talking to you, too!

Interested in trying Green Pastures? Just call 392-2145. Our Dairy Specialist will tell you just how to get the most for every feed dollar you spend. He'll explain why Green Pastures Pellets mean **more milk at less cost.** And he'll offer assistance in programming, planning, management.

He'll also ask you . . . "**. . .** How's milk production?" And he won't charge you a penny!
